

# Chapter 8 - Architectural Preservation District AP-3 - FINAL

## ARCHITECTURAL PRESERVATION DISTRICT - (AP-3)

This District contains neighborhoods that were constructed post-World War II Colonial Revival and a more modern style dwelling which includes the Pinecrest, Capitol Court, Crispus Attucks, and the Arts and Cultural District.

**For Guidelines for the modification of existing buildings and structures, see pages 3-6.  
For Guidelines for the construction of new buildings and structures, see on pages 7-15.**

**Baker House (1937)  
104 Westover Avenue**

**Keene House (1982)  
500 Capitol Court**

**Russell House (1975)  
418 Harriet Tubman Drive**

**Perkins House (1927)  
725 Lafayette Street**

**Cantwell House (1964,96)  
711 Tanyard Street**

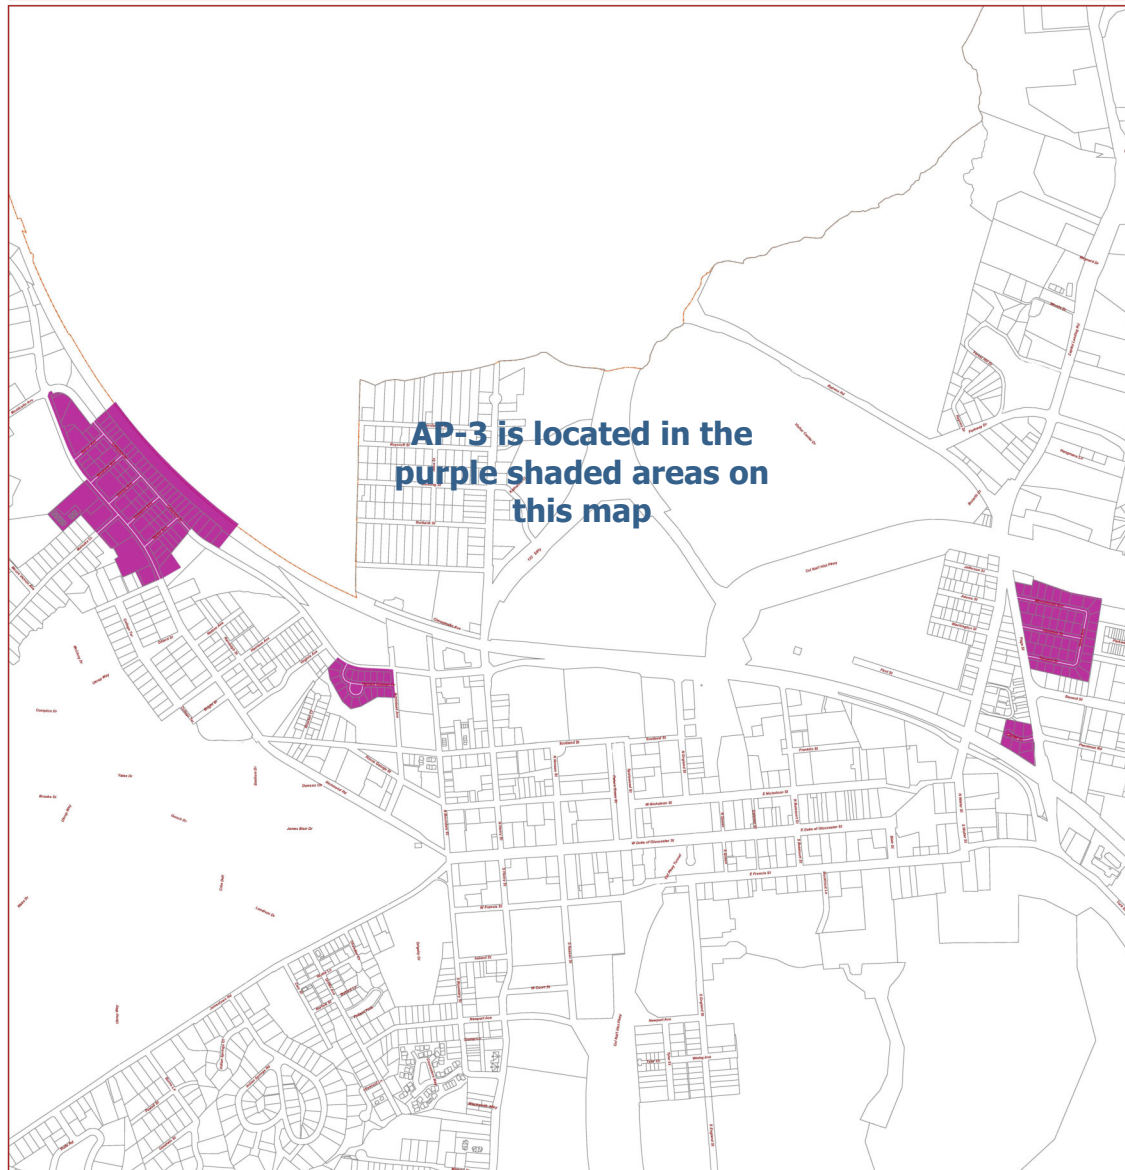

**1941  
704 Monumental Avenue**

**Lindsay House (1948,79)  
712 Monumental Avenue**

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

City of Williamsburg

Architectural Preservation District AP-3

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

### EXISTING BUILDINGS - (AP-3)

Preserving architectural features on the remaining historical buildings in the City is one of the principal goals of the Design Review Guidelines. Maintaining and repairing features such as siding, trim, doors, and windows is essential to that goal. Conservation is preferable to reconstruction because it preserves evidence of past building practices and construction techniques by retaining original materials. Original wood siding, trim, and architectural features should be retained and repaired on existing buildings whenever possible. Properties identified as contributing in Chapter 4 -Neighborhoods shall be maintained in the manner prescribed for existing buildings in the Architectural Review District in which they are located. For properties identified as non-contributing, the Architectural Review Board may consider the use of materials allowed for new construction.

### SIDING – (AP-3)

- Wood siding and trim on buildings listed on or eligible for the National Register of Historic Places (Appendix 1) must be replaced with wood siding and trim that matches or duplicates the existing material or product.
- Wood siding and trim on buildings listed on the Cities Listing of Buildings 50 years old or older (Appendix 2) should be replaced with wood siding and trim that matches or duplicates the existing material or product.
- Except for buildings listed on or eligible for the National Register of Historic Places (Appendix 1), the Architectural Review Board may grant the following exceptions on a case-by-case basis for existing buildings:
  1. If the original siding material is wood and it is covered with a synthetic material that cannot be

replaced in kind because the siding material is no longer available in the market, replacement with other types of similar synthetic siding may be considered as follows, provided that the original wood material is not removed:

- a. Aluminum siding may be replaced with vinyl siding that resembles horizontal wood siding.
  - b. Asbestos siding may be replaced with vinyl siding that resembles horizontal wood siding.
2. If the original siding material is a synthetic material and cannot be replaced in kind because the existing siding is no longer available in the market, replacement with horizontal wood siding or similar synthetic siding may be considered as follows:
- a. Aluminum siding may be replaced with vinyl or cementitious siding that resembles horizontal wood siding.
  - b. Vinyl siding may be replaced with cementitious siding that resembles horizontal wood siding.
  - c. Asbestos siding may be replaced with cementitious siding that resembles horizontal wood siding.
  - d. Masonite siding or other hardboard sidings may be replaced with cementitious siding that resembles horizontal wood siding.

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

3. If vinyl siding is approved for use, it shall meet the following standards:

Standard: ASTM D3679 is the accepted industry standard for quality.

Thickness: A minimum of 0.042 inches is required for impact resistance and durability.

Style: A beaded siding with a minimum of 6.5 inches of exposure is required.

Color: White, ivory, and other soft, colonial-style colors are recommended.

Applicants must provide specifications of their vinyl siding and trim details with their application. The specifications must address the items listed above. When applying vinyl siding over existing siding, it is important to consider retaining trim details with their applications.

- Engineered wood products may be considered on a case-by-case basis.
- Synthetic trim will be considered on a case-by-case basis.
- For guidance on rehabbing older buildings, see Chapter 12 Rehabilitation.

### **WINDOWS, STORMS, AND SHUTTERS - (AP-3)**

- Existing wood windows should be retained and repaired for buildings located in AP-3.
- If restoration is not possible, then copies of the original window matching the existing sash and frames with duplicates in wood following the early form and details will be required.
- Other window types may be replaced with windows that

are allowed in AP-3 for new buildings or additions on a case-by-case basis.

- Storm windows should be full view and constructed of wood or aluminum.
- An energy panel (interior storms) is an alternative to exterior storms and does not require approval from the Architectural Review Board.
- Operable wooden shutters, painted, and sized to fit the opening, must be retained and repaired.
- If restoration of existing shutters is not possible, then copies of the original wood shutter must be sized and installed to fit the opening with appropriate hardware. Vinyl and metal shutters are not allowed.
- High-quality composite material shutters that resemble original shutters may be approved on a case-by-case basis.

**712 Monumental Avenue**

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

### DECKS - (AP-3)

See Section 21-607 of the Zoning Ordinance for setback encroachments.

- Decks are not historic features for buildings prior to World War II and are therefore not acceptable in a front yard or if they are visible from a public street.
- More appropriate outdoor seating areas for backyards of traditional architectural styles are stone or brick terraces, patios, or pergolas designed to be compatible with the architectural style of the building.
- Unpainted, pressure-treated decks are not acceptable.
- If visible from a public street, they must be compatible with the building and contain rails that are appropriate for the architectural style of the building.
- For buildings constructed after World War II, decks, may be acceptable on a rear elevation if the design is compatible with the architectural style of the building.

### SOLAR FACILITIES - (AP-3)

- Only facilities located on the roof are allowed.
- Facilities shall not be visible from the Colonial Williamsburg Historic Area (CW).
- The use of solar roof tiles, laminates, glazing, and other technologies requiring the removal of intact historic fabric or permanently altering or damaging such fabric should be avoided.
- Solar panels should not project greater than 12 inches above the existing roof surface and should not be visible above the roof-line of a primary facade.
- Solar panels and their support structures should be

compatible with the existing roof color.

- Consider placing solar panels on an existing, non-historic addition or accessory structure, thereby minimizing the impact of solar installation on the historic resource's significant features and specifically protecting historic fabric from alteration.
- To the greatest extent possible, avoid placing solar panels on street-facing walls or roofs, including those facing side streets. Installations below and behind parapet walls and dormers or on rear-facing roofs are encouraged.
- Solar panels should not require alterations to significant or character-defining features of a historic resource, such as altering existing roof lines or dormers. Avoid installations that obstruct views of significant architectural features, such as overlaying windows or decorative detailing.

### OTHER ELEMENTS - (AP-3)

- Existing roofing material should be repaired or replaced in kind.
- Wood shingles, slate, architectural grade fiberglass shingles, high-quality synthetic slate, textured concrete shingles, and standing seam metal roofs are permitted.
- Material replacement in kind with no change to style or form does not require approval from the Architectural Review Board.
- Any change in materials on the exterior requires approval from the Architectural Review Board.

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

1001 Richmond Road

### NEW BUILDINGS AND ADDITIONS - (AP-3)

New designs should contribute to existing buildings located in the district. Additions and alterations should be compatible with existing building designs with the use of high-quality building materials.

- New buildings and additions should be constructed of brick, horizontal wood siding, vinyl, aluminum, stucco, or cementitious siding. Wood shingles may be appropriate depending on the specific design.
- If vinyl siding is approved for use, it shall meet the following standards:

**Standard:** ASTM D3679 is the accepted industry standard for quality.

**Thickness:** A minimum of 0.042 inches is required for impact resistance and durability.

**Style:** A beaded siding with a minimum of 6.5 inches of exposure is required.

**Color:** White, ivory, and other soft, colonial-style

colors are recommended.

Applicants must provide specifications of their vinyl siding and trim details with their application. The specifications must address the items listed above. When applying vinyl siding over existing siding, it is important to consider retaining trim details with their applications.

- Engineer wood products may be considered on a case-by-case basis.
- Metal siding, tiled-faced or ceramic-faced masonry units, and synthetic stucco such as EIFS are not allowed.
- Wood siding should be horizontal with a six to eight-inch exposure.
- Side and rear elevations should relate to the design elements and materials of the front elevation.
- Any wall should be built of not more than two materials, and those materials should change along a horizontal line such as a floor line or gable end. The heavier material, such as brick, should always be below the lighter material, such as wood.
- Small additions may be constructed with the same type of siding that is on the building, provided it matches the existing siding material in color, size, and thickness.
- Solid synthetic trim may be allowed on a case-by-case basis.
- All wood siding, wood shingles, and wood trim shall be sealed with paint or an opaque stain.
- Mortar used for brick should be buff or gray. White mortar

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

is not recommended.

### DOORS - (AP-3)

- Entrance doors should be wood or fiberglass with panels or some variation thereof. Windows, sidelights, and transoms in entrance doors are permitted, provided that they are proportioned and appropriate to the specific style of the building.

- Flush doors with applied trim are not permitted.
- Garage doors, utility doors, and service doors should be painted wood, steel, aluminum, or fiberglass and should correspond with the style of the building. For purposes of this section, utility and service doors are not located on the front of the structure.
- Storm doors should be made of painted wood or aluminum. Storm doors should relate to the architectural character of the entrance.
- Screen doors should be made of wood or aluminum with full view, and may be shuttered if appropriate for the specific style of the building.

### PORCHES, DECKS, TERRACES, STOOPS, AND RAILS - (AP-3)

- Porches with a narrow frontage should be no less than six feet deep, while porches with a wide frontage should be at least eight feet deep.
- Porches and stoops should be constructed of wood or brick

and contain appropriate-sized columns and rails for the design.

- Terraces may be constructed using masonry elements that are consistent with the structure.
- Solid synthetic materials will be considered on a case-by-case basis. Samples of proposed materials must be submitted with the application.
- Materials for railings may be wood, wrought iron, steel, or aluminum and should be designed to complement the architectural design of the building. Solid synthetic rails will be considered on a case-by-case basis.
- Face nailed balusters to a bottom and top rail are not acceptable.
- Screened porches should be located on the side or rear of the building.
- Columns are preferred to be Tuscan or Doric orders, although other types exist within the area. When used, columns should have correct proportions and profiles as described in The American Vignola and other traditional pattern books.
- Columns may be made of wood, although high-quality fiberglass columns and cellular PVC are acceptable.
- All posts should be at least five inches in the least dimension.
- Wood columns and posts should be sealed with paint or opaque stain.
- Modern deck designs are not appropriate in a front yard or if visible from a public street.
- Stoops at secondary entrances should be made of wood, brick, or concrete. If made of concrete, the sidewalls and stair risers should be faced with brick.

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

### WINDOWS, STORMS, SHUTTERS, AND AWNINGS - (AP-3)

Windows contribute to the façade of a building and will be evaluated on (1) the pattern of the openings and their size; (2) proportions of the frame and sash; (3) configuration of window panes; (4) muntin profiles; (5) material; (6) paint color; (7) characteristics of the glass; and (8) details or decorative elements.

- Wood, vinyl-clad wood, or pre-finished aluminum-clad wood windows are allowed.
- High-quality synthetic windows may be approved on a case-by-case basis. Applicants must provide the AAMA/WDMA/CAS101/I.S.2/A440-11 certification reference, manufacturer's warranty (minimum 15 years), local examples of existing installation with a duration of at least 5 years, and how long the manufacturer has been in business (recommended length of business is at least as long as the warranty period).
- Windows in the Arts and Cultural District must have muntins on the exterior.
- Windows located in **AP-3** outside of the Arts and Cultural District may have muntins on the interior or exterior of the glass.
- Windows should be rectangular single, double, or triple hung or operable casement type.
- Semi-circular, circular, or hexagonal windows are permitted but with minimal application and should be consistent with the architectural character of the building.
- Windows on the ground floor should be the same proportion but slightly larger than windows on upper

floors.

- Window openings in upper floors should be centered directly over openings in the ground floor whenever possible.
- Openings in gable ends should be symmetrical.
- Window openings should be at least three feet from building corners.
- Total glazed area on the street frontage should not exceed 30 percent of the total surface.
- Storm windows should be full view and constructed of wood or aluminum.
- An energy panel (interior storms) is an alternative to exterior storms and does not require approval from the Architectural Review Board.
- Shutters may be wood, vinyl, or high-quality composite shutters. If used, they must be sized to fit the opening, and fully operational with appropriate hardware.
- Metal shutters are not allowed.
- Awnings, if used, must be made of fabric with side panels to cover the undercarriage. Vinyl and metal awnings are not allowed.

### ROOFS - (AP-3)

The types of wood-framed roofs typically fall into categories of symmetrical gables, gambrels, or hip roofs. Roof slopes are expressed as (y) inches of vertical rise : (x) feet of horizontal run. One-story primary roofs should have slopes not less than 7:12 and no steeper than 14:12. Two-story primary roofs may be as low as 4:12 and no steeper than 14:12. Secondary roofs may have slopes less than 7:12 depending on the material used

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

(i.e., metal roof over porches can be less than 7:12; whereas a shingle roof should be not less than 7:12). On residential structures, flat roofs should be used only as occupiable areas directly accessible from the outdoors. These must have appropriate parapets and railings.

- Wood shingles, slate, architectural grade fiberglass shingles, metal shingles, high-quality synthetic slate, textured concrete shingles, and standing seam metal roofs are permitted. High-quality synthetic slate roofs must meet the following minimum standards: Impact UL 2218-Class 4, Accelerated Weathering ASTM 4798—little or no color changes, and Freeze-thaw ICC-ES Acceptance Criteria ACO7 Section 4.9—no crazing, cracking, or other adverse surface changes, which must be provided with the application.
- Shiny metal roofs, exposed aluminum or exposed galvanized metal roofs, ceramic or synthetic ceramic roofing tiles, stamped metal decorative roofing panels, flat roofs, plastic, vinyl or other synthetic types of roofs are not permitted.
- Metal roofs may be appropriate for porch roofs or ancillary elements and should be copper or Galvalume type. Other colors may be acceptable on a case-by-case basis.
- Non-glossy colored anodized metal roofs should be gray, black, brown, dark green, or other earth tones. Flashing may be copper, vinyl, or anodized aluminum.
- Copper roofs, gutters, and flashing should not be painted or sealed but should be permitted to age naturally.
- Gable roof ends should have a minimum overhang of 12 inches.

- Single plane pitch roofs, i.e., shed roofs for houses, shall not be used on the main house but can be used on wings.
- Roof penetrations should be on the rear slope of roofs and painted to match the color of the roof. Skylights or solar panels should be mounted on the rear slope of the roof, colored to match the roof, and not be visible from the street.
- Dormers should have gabled, hipped, or shed roofs.
- Shiny metal roof vents, fireplace stacks, plumbing vents, or other pipes are not acceptable.
- Gutters and downspouts should be made of copper or aluminum and may be half-round or ogee. Where gutters are not used, it is recommended that brick, concrete, or gravel be placed at the drip line.

### **SOLAR FACILITIES - (AP-3)**

- Only facilities located on the roof are allowed.
- Facilities shall not be visible from the Colonial Williamsburg Historic Area (CW).
- The use of solar roof tiles, laminates, glazing, and other technologies requiring the removal of intact historic fabric or permanently altering or damaging such fabric should be avoided.
- Solar panels should not project greater than 12 inches above the existing roof surface and should not be visible above the roof-line of a primary facade.
- Solar panels and their support structures should be compatible with the existing roof color.
- Consider placing solar panels on an existing, non-historic addition or accessory structure, thereby minimizing the

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

impact of solar installation on the historic resource's significant features and specifically protecting historic fabric against alteration.

- To the greatest extent possible, avoid placing solar panels on street-facing walls or roofs, including those facing side streets. Installations below and behind parapet walls and dormers or on rear-facing roofs are encouraged.
- Solar panels should not require alterations to significant or character-defining features of a historic resource, such as altering existing roof lines or dormers. Avoid installations that obstruct views of significant architectural features, such as overlaying windows or decorative detailing.

### CHIMNEYS - (AP-3)

- Chimneys can be used but are not required. They should be constructed of brick (unpainted) or, if constructed with the same material as the siding of the building, painted to match the building.
- Chimneys should be capped to conceal spark arresters.
- Primary chimneys should be rectilinear in design and should have a corbelled termination in keeping with existing types.

### OUTBUILDINGS - (AP-3)

- Outbuildings must meet the same criteria (i.e., walls, openings, roof, etc.) as noted above for the main building.
- Metal outbuildings are not permitted.

### FENCES - (AP-3)

- Wood, aluminum, and wrought iron fences in keeping with a residential scale are permitted. The maximum height allowed for fences located in a front yard is four feet, with up to six feet being allowed for a side or rear yard.
- Solid synthetic materials may be considered on a case-by-case basis.
- Salt-treated wooden fences must be painted or stained.
- Chain-link, wire, plastic, and vinyl fences are not permitted.
- The finished side must face the street and/or adjoining properties.
- Fences should contribute to the site's character and not detract from the site's principal architectural features and should be compatible with adjacent sites.
- Fences that disrupt the harmony of the streetscape by breaking up

# Chapter 8 - Architectural Preservation District AP-3 - FINAL

established architectural rhythms are discouraged.

## **SITE ELEMENTS, SITING, AND LANDSCAPE FEATURES – (AP-3)**

- Site elements should contribute to the site's character and not detract from the site's principal architectural features and should be compatible with adjacent sites.
- Mechanical equipment and trash facilities should be located in a side or rear yard and screened with a fence which must be stained or painted to match the building.
- Landscape features above grade, but less than three feet in height may be constructed of timber, brick, or stone.
- Retaining walls (three feet or greater), if visible from the street, shall be constructed of brick. Retaining walls not visible from the street may be constructed of brick, stone, block, timber, or smooth finished concrete. If rails are required, they should be constructed of wrought iron or aluminum and colored to blend in with the building.
- Site furnishings such as tables, chairs, benches, planters, flower pots, light poles, trash containers, bike racks, and similar furnishings for commercial properties, must be submitted and approved by the Board on a case-by-case basis. Single-family residential site furnishings do not require approval from the Board.

## **SMALL CELL WIRELESS FACILITIES-(AP-3)**

- Facilities located on the interior of a building are permitted. Facilities not visible from the Colonial Williamsburg Historic Area (CW) or from a public right-of-way may be allowed if appearance and screening requirements are designed as outlined in the Design Review Guidelines. Co-location on utility poles may be permitted if appearance and screening requirements are designed as outlined in the Design Review Guidelines.
- Facilities shall not be visible from the Colonial Williamsburg Historic Area (CW) or a public right-of-way. Facilities shall be painted the same color as the structure for facilities affixed to the exterior of a building. All surfaces must contain a matte finish. Co-location on utility poles on private property must be painted to match the utility pole color. No shiny or reflective surfaces shall be allowed.
- Screening may be required for facilities. If required, screening shall match the existing building material. If there is no existing building, the facility must be screened with a wooden privacy fence not to exceed six feet in height. Salt-treated wooden fences must be painted or stained with the finished side of the fence facing the street and/or adjacent properties.

## Chapter 8 - Architectural Preservation District AP-3 - FINAL

### PAINT - (AP-3)

- Painted siding and trim should be limited to two colors from the approved color palette unless additional colors are approved by the Architectural Review Board on a case-by-case basis. A third color may be used for shutters and doors.
- Buildings located in the Arts and Cultural District will allow a wider range of colors and the total number of colors to allow flexibility and latitude in design.
- Additional paint colors from the approved color palette may be approved on a case-by-case basis for properties in the Arts and Cultural District.
  - If colors are proposed that are not from the approved color palette; they may be approved by the Architectural Review Board on a case-by-case basis. Specific color chips or samples to include the color name must be submitted with the application.
- Brick that is bright red, orangish-red, pink, light red, or other colors may not be acceptable. Brick color should be a through-the-body color.
- Siding that is pink, bright silver, red, bright green, or blue, or colors that are visually out of character for the area and architectural style are not acceptable.
- Wood fences and decks must be painted or stained. Split rail fences may be left natural.
- Existing single-family dwellings or commercial buildings may duplicate or match existing color schemes without approval from the Architectural Review Board.
- Any new color scheme for single-family dwellings proposed to be applied to already painted surfaces comprised of no more than three colors as stated below from the Benjamin Moore Colonial Williamsburg color palette does not require approval from the Architectural Review Board.
- Any new color schemes for commercial buildings must be approved by the Architectural Review Board. New color schemes should respect the architectural style of the building and the colors of existing signage for any business on the property.

# Chapter 8 - Architectural Preservation District AP-3 - FINAL

## ACCEPTABLE COLORS FOR SIDING, DOORS, SHUTTERS, TRIM, AND WINDOWS - (AP-3)

Buildings shall be stained or sealed with a natural earth tone or painted using colors from the following Benjamin Moore Williamsburg color palette. These colors are approved for use on the entire structure.
